

Amendments to the Abstract

Please **add** the following Abstract to this application.

-- Several data streams contain video, audio and/or other data. Some of the data streams are pre-recorded in a multiplex on a storage medium while other data streams are located out of the data stream multiplex on the storage medium. The data streams are synchronized using a navigation file (~~List_of_PlayItems~~), which comprises descriptors (~~PlayItems~~, ~~SubPlayItems~~) pointing to parts of said data streams, wherein said descriptors define the arrangement in time for said data streams by means of data sub stream paths.--
